“CGX” Material

The MPRCseals.com “CGX” material was developed to mold into metal surfaces with imperfections, as seen with water jumper saddles and piping. CGX is easy to apply to any sealing surface, as it molds easily to various shapes and surfaces where other materials fail to seal. CGX material gives you longer service life, resulting in less maintenance and repair costs over time. Avoid unexpected downtime and seal your application with “CGX” from MPRCseals.com!

For standard service and non-pitted water jumpers, our standard material- (MPRC Style 7800,) works well and is less expensive than the CGX material. In the event that water jumpers are pitted or corroded, potentially leaking water into the air-box, MPRCseals.com suggests our premium “CGX” material for the application.

Call today at 800-397-3429 or visit us at MPRCseals.com to see if CGX is right for your application.

Since 1982, Master Packing & Rubber Company has become a sealing specialist recognized by OEM's Railroad, Marine and Power Generation Companies, providing innovative sealing solutions for some of the most demanding applications. Keeping the engine sealed is a primary goal, and using MPRCseals.com premium materials has significantly improved this goal.
