## Molded FDA Railcar Manway Gaskets

MPRC is beginning production of fully molded standard Railcar Manway gaskets, for use in FDA service.

Our peroxide cured white nitrile meets FDA 21 CFR177.2600, with benefits including greater resistance to compression set, and increased recovery properties than those of sulfur cured materials currently supplied. MPRC molded gaskets are made of premium quality materials, offering improved physical properties, enhanced gasket performance, and increased shelf life. MPRC's unique molding process offers the ability to put custom identifiers directly onto the part, to better identify both the size and manufacturer of the gasket. This molding process allows MPRC to control each aspect of quality and production from start to finish; ensuring we have an exceptional quality gasket to meet the needs of our customers in a timely manner.
