MPRC Fuel Bowl Seal

MPRC, *innovators in seal technology*, have been working with diesel engine owners in search of better solutions to keep fluids in the engine. MPRC has focused on fuel bowl leakage found on EMD® fuel filter assemblies that require sight glass fuel bowls.

These fuel filter assemblies are commonly equipped with flat black (Nitrile) gaskets. The flat fuel bowl gaskets have been standard equipment. Pressurized leaking problems can occur due to miss alignment of the glass bowl to the gasket, in addition to gasket fretting or deterioration, which is common with flat gaskets. Both can become safety issues for personnel and equipment.

MPRC was asked to fix these sealing issues, and by developing a self-centering fuel bowl seal utilizing our proprietary Chemours Viton™ compound and molding expertise, a much safer seal was created that lasts.

Call MPRC at 800-397-3429 to learn more about our Fuel Bowl Seal and order yours today!
