

## INNOVATORS IN SEAL TECHNOLOGY

## Head Frame Kit for EMD® Engine models 567/645/710

Featuring the MPRCseals.com “Bigfoot™ Top Cover Seal” and Style “CGX” Premium Gasket Material.

As fluid sealing specialists, Master Packing & Rubber Company understands the primary concerns of our customers and works hard to continually develop innovative and effective sealing solutions that improve performance and life-cycle.

One critical component to effective sealing is keeping oil within the engine. Over time industrial diesel engines develop fluid leak points that standard fiber gaskets are unable to prevent and keep from penetrating through. Underlying factors that contribute to these leak points are:

- Mechanical surface distortion
- Surface prep prior to gasket installation
- Corrosion and pitting of metal surfaces
- Application of lubricants/sealants

MPRCseals.com has developed a solution to these common industrial engine leak points- the MPRC Style “CGX” gasket material. CGX was developed to mold into metal surfaces with imperfections, as seen with water jumper saddles and piping for example. CGX is easy to apply to any sealing surface, as it molds easily to various shapes and surfaces where other materials fail to seal. Increase service life, lower maintenance and repair costs, and avoid unexpected downtime by sealing your application with “CGX” from MPRCseals.com!

MPRCseals.com offers a full overhaul kit, individual kits (such as center section only,) and individual gasket items. MPRCseals.com gives you multiple sealing options. Let us be your solution! Call 800-397-3429 to learn more about our Head Frame Kit for EMD Engine models 567/645/710 today.
