

Innovative Sealing Solutions for Rail Tank Cars

MPRCseals.com offers several sealing solutions for Rail Tank Cars including standard lathe cut Manway and Hatch Cover gaskets, fully molded Manway and Nozzle gaskets, and Bottom Outlet Valve gaskets.

The MPRC Manway Gaskets accommodate common problems with 18" and 20" tank car manways. Its elastomeric properties offer memory use after use. Easily seal uneven and rough seating surfaces with low bolt loads with this gasket. This unique design is available in white FDA Nitrile, white FDA Neoprene, black Neoprene, EPDM, and Viton® compounds to meet your chemical, fuel, and food grade transportation requirements.

The MPRCseals.com Molded FDA Railcar Manway Gasket is peroxide cured white Nitrile that meets FDA 21 CFR177.2600. Benefits of this gasket include greater resistance to compression set and increased recovery properties than those of sulfur cured materials supplied in a standard lathe or "flat-cut" gasket. MPRC molded gaskets are made of premium quality materials, offering improved physical properties, enhanced gasket performance, and increased shelf life. Our unique molding process offers the ability to put custom identifiers directly onto the part, to better identify both the size and manufacturer of the gasket. Each step of the molding process is meticulously monitored, ensuring exceptional quality and timely production.

The M-Nozzle™ Gasket from MPRCseals.com is a simplified solution for reducing excessive gasket inventory. Use in place of a manway or "top hatch" cover gasket, and enjoy the benefits of easier gasket installation and safer gasket removal with this fully molded gasket from MPRC. Supplied in an FDA Black Nitrile (80 Durometer), as well as a Blue EPDM (70 Durometer), the MPRCseals.com M-Nozzle™ Gasket is suitable for sealing food sweeteners and/or ethanol and petroleum products. The M-Nozzle™ Gasket fits on any standard 20" Tank Car nozzle, and eliminates the common headaches with removing standard flat lid mounted gaskets. Simply slip on and off the nozzle and the unique design will clamp and hold the gasket in place. Also available with brass grommet insert in tab for zip tying through bolting assemblies for added security.
