M-Nozzle™ Gasket

With so many sizes and variations in manway cover gaskets, it's often difficult to know if you've grabbed the right gasket for the right tank car. **Introducing the new MPRCseals.com M-Nozzle™ gasket - A simplified solution.** Reduce excessive inventory while at the same time enjoying the benefits of easier gasket installation and safer gasket removal. The M-Nozzle™ gasket can be used in place of a manway or "top hatch" cover gasket.

Made in house at our Cedar Rapids, IA headquarters, the new M-Nozzle™ gasket is supplied in an FDA Black Nitrile, (80 durometer,) and a Blue EPDM, (70 Durometer) material. Our gasket meets the demands of a high performance seal, suitable for sealing food sweeteners and/or ethanol and petroleum products. For ease of installation and removal, our M-Nozzle™ gasket fits on any standard 20" tank car nozzle. No more hassle and headache with removing the gasket, a common issue with standard lid mounted gaskets. Simply slip on and off the nozzle and the unique design will clamp and hold the gasket in place.

Our various molds have been designed to offer at least one tab that can be used both for identification, and to zip tie through one of the bolting assemblies for added security. Tabs are available with or without a brass grommet.

One Gasket - One Answer - ONE SOLUTION
