

MPRCseals.com:

Quality products designed, engineered, and made with the highest-quality materials from the fluid sealing specialists you've come to trust.

Veteran owned and trusted since 1982

As a proud Distributor of Premium SEPCO® Products, MPRC is proud to offer our customers this Innovative Sealing Solution:

SEPCO® EXP Bearing Isolator

With an innovative and revolutionary hybrid design, the EXP Bearing Isolator merges proven labyrinth technology with a new generation of Expeller Technology, allowing users to achieve performance levels as never before. The EXP maximizes bearing life and significantly reduces operating costs, allowing you to save on lubricants, oil changes, labor and overtime, bearing replacements, equipment failure, downtime, and worn shafts.

Conditions sealed: Oil mist, Flooded oil, Grease, Forced lubrication.

The number one cause of rotating equipment failure is bearing failure.

The number one cause of bearing failure is lubrication contamination.

THE NUMBER ONE SOLUTION IS EXP!

Why it works:

It's a true non-contact bearing isolator. Using centrifugal force, it adds energy to the contaminants to deflect them away from the bearing housing while effectively retaining lubrication. Two static internal coalescing O-rings exclude vapor ingress by breaking it down and directing it to the contamination expeller chamber. It can be split for ease of installation. The EXP helps expel contaminants, eliminates lubrication leakage, and prevents water contamination.

MPRC has the products you need to keep your facility running safely and at peak performance. Enjoy the reliable seal performance of the SEPCO® EXP for the life of your equipment! To learn more, call today or email:
