

Replacement GE Expansion Joints For 7FDL Engines

ONE PIECE FLANGE AND FLOW SHIELD

As innovators in seal technology, MPRCseals.com has developed a tighter clearance between the bottom flange and the end of the flow shield for greater protection of the bellows. MPRC has closed up the flow shield to the bottom shield, and in doing so, created further protection of the bellows from hydrocarbon build up.

Material Highlights:

- Bellows Material: AISI 321SS, 5 Convolutions of 4 ply of .305mm thick
- Weld Rings to attach bellows to flange rings: 321SS, 1.5mm thick
- Flanges and flow shield are investment cast 309SS

Since 1982, Master Packing & Rubber Company has become a sealing specialist recognized by OEM's, Railroad, Marine and Power Generation Companies, providing innovative sealing solutions for some of the most demanding applications. Keeping the engine sealed is a primary goal, and using MPRCseals.com premium materials has significantly improved this goal.
